

Asha Abdulkadir
Week 9 Research

MySQL supports several standard SQL data types. Each column can only contain one data type under the following categories.

Numeric – INTERGERS, DECIMALS, FLOATING POINT

Date and time – divided into: DATE, TIME, DATETIME, TIMESTAMP & YEAR

String(Text Formats) - TEXT, BLOB, CHAR & VARCHAR, BINARY & VARBINARY, ENUM, SET

Spatial- stores geometry and geography values in the table column

JSON- stores JSON documents in JSON column and provide access to document elements easily and quickly.
